Summary

Full-stack developer with over four years of experience building web applications using Next.js, React, TypeScript, Node.js, and MongoDB. Focused on clean, maintainable code, responsive interfaces, and efficient API integration, using AI tools to support development without compromising code quality.

Technical Skills

- **Frontend** - Javascript, Reactjs, **Nextjs**, Redux, Tailwindcss, Framer motion, Gsap
- **Backend** - Nodejs, Expressjs, TypeScript
- **DataBase** - MongoDB
- **AI Tools** - ChatGPT, Claude, Gemini, Perplexity

Project Work

[POS Inventory Management](#) - Management tool

Dec 2025 – Jan 2026

- **Purpose:** Developed a secure, real-time POS application tailored for retail businesses, featuring role-based access control, supplier order tracking, and fast keyboard-optimized checkout.
- **Role-Based Security:** Granular permissions for owners, managers, and cashiers to protect your sensitive data.
- **Supplier Portal** Manage purchase orders, restock alerts, and supplier contact info in one place.
- **Customer Management** Build loyalty with customer profiles, purchase history, and personalized discounts.
- **Real-Time Tracking** Inventory updates automatically across all terminals. Never oversell or run out of stock again.
- **Fast Checkout** Optimized for speed with keyboard shortcuts and a clean UI that keeps lines moving.

[Payra](#) - E-commerce

Apr 2026 – July 2026

- **Purpose:** Designed and deployed a full-stack e-commerce application to deliver a secure, highly responsive shopping experience featuring real-time notification,users,chat support and automated payment workflows.
- Developed a full-stack e-commerce platform using Next.js, Node.js, Express, and MongoDB with role-based access control (RBAC).
- **Real-Time Notification & Live Chat:** Integrated Socket.io for instant admin alerts (new orders, user activities) and real-time support chat between customers and admins.
- Built comprehensive CRUD modules for products (variants, categories), orders, coupons, reviews, cart, and watchlist.
- **Cloud & Operations:** Automated recurring database maintenance using cron tasks and implemented a Cloudinary image pipeline for multi-category asset optimization.

[MovieX](#) - Entertainment Platform

July 2025 – Sept 2025

- **Purpose:** Built a dynamic movie discovery web application to help users seamlessly browse trending films, view ratings and reviews, watch official trailers, and filter entertainment content in real time.

- API Optimization: Integrated dynamic API fetching to retrieve comprehensive movie and TV show data, implementing efficient data caching and request handling strategies to minimize load times.
- Performance Optimization: Focused on speed and efficiency by utilizing lazy loading for images and components, and implementing debounced search inputs to drastically reduce unnecessary API calls.
- State Management: Utilized global state management (Redux/Context API) to seamlessly sync user preferences, search states, and watchlists across routes.
- UI/UX Design: Designed a clean, fully responsive interface featuring dynamic poster grids, trailer video popups, and intuitive genre/category filtering across all screen sizes.
